

Webstore About Us

Established in 2013, Explosion Technologies is an Australian based company specialising in maintenance, overhaul, repair, supply and installation of underground mining and hazardous area electrical equipment.

Explosion Technologies is accredited to ISO 9001:2015 and is a NATA Technically accredited workshop in Group I and II and NSW registered electrical workshop for explosion protected repairs.

Explosion Technologies offers on-site inspection for pre-overhaul and other associated electrical inspections and maintenance in accordance with NATA inspection body accreditation and relevant standards. Together with engineering and workshop facilities for the supply and installation of specialised underground mining equipment (explosion protected) including power supply systems and components, methane detection systems, engine management systems, sensors, vehicle lighting & associated products.

Explosion Technologies also can undertake small general fabrication and reclamation works for all industries.

Recently Explosion Technologies has expanded its offerings into other markets including vehicle electrical accessories such as light bars, reverse alarms, strobes and general consumables through its Australian wholesale suppliers. All these goods are covered by Australian warranty and local delivery.
